H

CONTENTS OF CD-ROM

The CD-ROM supplied with the thesis contains all the source code developed by the author, plus an electronic version of the thesis. Dynamic models, results from theoretical simulations and measurements on the field are also included. Table H.1 lists the folders contained in the CD-ROM disc. Word documents inside the folders explain in detail their content (i.e., instructions for running the programs).

Table H.1 – List of Folders

Folder name	Content	Chapters
Thesis	Electronic version of the thesis	1 to 10
Algorithm	Source code for B-WIM algorithms	3, 7
BWIM	Source code for B-WIM system	4
Nastran	Finite element models, results and code for simulations	6
Numerical	Planar models, results and code for numerical simulations	5
Experimental	Measurements from experiments	8
